Introduction

How does the app work?

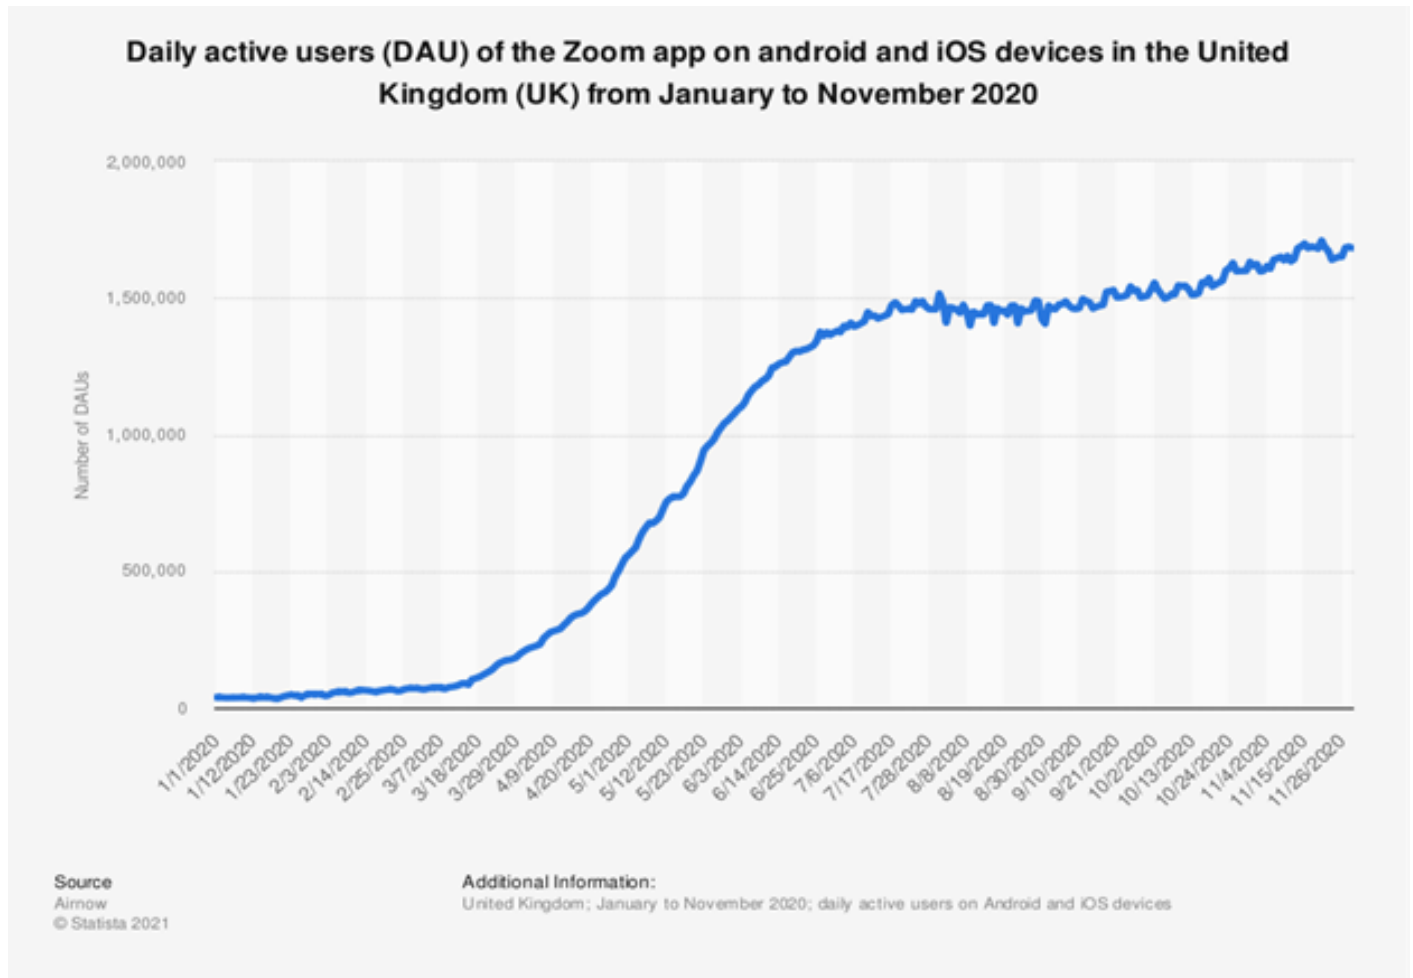

Zoom is a cloud audio/video conferencing application including chat feature that comes in the form of desktop application, mobile application and browser. Zoom allows the following types of communication – Chat Sessions, Group audio/video calls, Webinars & Training sessions.

Plan	Price (₹)	Maximum Participants	Meeting time limit
Free	0	100	40 mins
Pro	13200	100	30 hours
Business	18000	300	Nil
Enterprise	21600	500	Nil

Competitors

- Google Meet
- Microsoft Teams
- Cisco Web-Ex
- Amazon Chime
- GoToMeeting

Graph of number of users vs. time

User Personas

Who are their primary users?

- Students in schools & colleges
- Teachers in schools & colleges
- Working Professionals
- HR recruiters using Zoom for conducting interviews
- Individual users, for calling friends & family
- Trainers conducting online workshops

Customer Journey

Intimate video/audio call through social media/IMs/email

Useful Features

- Option to easily integrate Zoom and Outlook calendar
- Chat option to connect with anyone via email

Pain Points

- People might forget to schedule a zoom call
- People might change their plans later which is not intimated
- Scheduling meeting is difficult as we do not know when people are free

Receive invite via social media/IMs/email

Useful Features

- Easy to send meeting links

Pain Points

- Links might get lost
- People might forget to join the meeting

Click the link and enter zoom meeting (after entering a password if prompted)

Useful features

1. Easy to enter meetings via links

Pain Points

- Annoying to remember the password
- Might not get the meeting context if joining late
- Audio/microphone issues

Engage in conversation during the meeting

Useful Features

- Touch Up appearance – Users can change their appearance by adding filter
- Polling – Hosts can ask questions and engage audience via polls
- Annotation – Users can annotate on the shared screen if permission is granted
- Break-Out Rooms – This helps users engage in discussions in small sub-groups within the meeting
- Screen-Sharing – Users can share their screens during the meeting to show multiple screens
- Whiteboarding – Host can enable a whiteboard which can be used by participants if granted permission
- Live Language Interpretation – Foreign languages is translated via live interpreter. Limited languages are available as of now.

Pain Points

- Searching for a particular link/text through chat is difficult
- All files will have to be downloaded to be viewed
- Difficult to manage breakout rooms, host has to manually move through all rooms
- Users might be zoned out during meeting, no way to track attentiveness
- Q&A might get lost in chat
- Limited presentability options, where users cannot present a shared screen background and presentation cannot be controlled by multiple users
- Users might switch to browser to search for content relevant to the meeting if they do not understand the discussion
- Users might be unknowingly muted while they are speaking

Exit Meeting & Access Meeting video if recorded

Useful Features

- Meeting video recorded on cloud for pro users
- Video can be shared easily
- Automatic transcription of recorded video in multiple languages

Pain Points

- Video editing option is not available

Follow up if required

Pain Points

- Meeting action items has to be noted by participants, can be missed
- Follow Up meeting may need to be scheduled

Solutions

Zoom Calendars – In app calendar which will track the schedule of individual users. Will send reminders before each meeting.

Meeting Summary – This feature will display a summary of the meeting discussion at any point during the discussion.

Smart Chat – AI driven chat where users can get their questions answered. Users can send pictures without attaching; have separate tabs for Q&A, chat and media.

Smart Monitoring – AI can be used to track attentiveness of participants. Host/speaker can gauge if audience is able to comprehend the discussion.

Smart Mute – Users will be unmuted/muted when they speak/not speak.

Advanced Presentation – Multiple participants will be visible on the screen with a shared slide deck as their background. Each participant can control the slide.

Video Edit – Basic video editing options can be provided like trim, crop, etc.

Separate breakout rooms – Host will be able to see all the breakout rooms on the single zoom screen and will be able to talk to them after unmuting them individually. Host does not have to move through different breakout rooms separately.

Metrics to track

North star metric - Number of weekly hosted meetings

Acquisition

- % of new users joining the zoom platform/ downloading app
- % new users making an account on zoom

Activation

- % of users downloading the app and joining a meeting
- % of users spending more than 60 mins after joining a meeting

Revenue

- Number of users paying for the zoom application (pro, business, enterprise)
- Number of users paying for zoom rooms and workspaces, zoom phones and zoom video webinars

Retention

- % of users visiting the app 3 times in 30 days
- % users spending more than 120 mins each week

Referral

- % of users referring an activated person

Risks and Challenges

- Time and a lot of resources would be needed to develop the above features.
- Smart chat may spam the chat difficult for the class to follow what is going on in the chat.
- Smart mute may unmute itself when background noises are audible.
- So many features may bombard the users with a lot of options and would take away the simplicity of the application
